Introduction

This document describes the requirements, new features, enhancements, and known limitations in Sugar Community Edition 5.2.

You can upgrade from Sugar versions 5.0x, and 5.1 to Sugar version 5.2. The Sugar 5.1 plugins and extensions are compatible with Sugar 5.2.

Note: It is strongly recommended that you make a copy of your production system and use it to test 5.2.

Please continue providing feedback on this release as we continue to develop Sugar functionality for the upcoming releases. We will continue to work to incorporate your feedback into the development process. The SugarCRM Development Team is closely monitoring your feedback and is making every effort to fold it into upcoming releases.

For more information on a bug or to provide feedback, use the SugarCRM Bug Portal which is accessible through <http://bugs.sugarcrm.com>. Use “5.2.0” to designate new bugs found in this release. You can also update existing bugs with additional information.

Check the Bug Portal for known issues prior to submitting bugs.

Topics include:

- [“Requirements for 5.2” on page 1](#)
- [“New and Enhanced Features” on page 2](#)
- [“Compatibility Matrix” on page 4](#)
- [“Known Issues” on page 5](#)

Requirements for 5.2

Requirements for 5.2 are as follows:

- Increase the value of the `memory_limit` parameter in the *php.ini* file as follows:
 - MySQL Server: 40M or higher
 - MS SQL Server: 40M or higher
- To install Sugar 5.2 successfully, ensure that the MB String module is installed in your PHP libraries.
- If you are using MySQL, you must install version 4.1.2 or higher to use with Sugar 5.2.
- For Microsoft Exchange, Sugar supports only versions 2000 and higher.
- Before upgrading to 5.2, navigate to the *php.ini* file on your system and change the *post_max_size* and *upload_max_filesize* settings to more than 20MB. Restart Apache and then begin the upgrade process.
- The process of upgrading to 5.2 can take up to an hour. If you are using the IIS Web server, you need to ensure that the CGI application does not time out. To do this, on IIS, set the CGI script timeout to more than 300 seconds, which is the default value.
- In order to better support multi-byte character storage with Microsoft SQL Server, You can configure Sugar to use FreeTDS driver. see “Installation Prerequisites and Guidelines” in the *Sugar Community Edition Installation and Administration Guide*. The supporting files are in a zip file, *sugarcrm-MB-mssql.zip* at http://www.sugarforge.org/frs/?group_id=6.

New and Enhanced Features

Sugar 5.2 offers the following new and enhanced features.

Connectors to External Data Sources

Sugar provides a connector to LinkedIn. Additional connectors to other data sources can be obtained and installed using Module Loader.

Sugar Feed

Sugar Feed enables users to be informed as soon as a user creates a new contact, lead, opportunity, or case. Users can add a My Sugar Feed dashlet on their Home page so that when a user performs any of these actions, a message displays in the dashlet on their Home page. Users can also be notified when a lead is converted, when a case is closed, and when an opportunity is closed.

Additionally, users can post status updates, external links, images, and YouTube videos for other users to view within the dashlet.

My Portal Dashlet

Sugar provides a My Portal dashlet that presents product information and news about SugarCRM on your Home page. You can add additional My Portal dashlets to view information from external web sites and applications directly within your Sugar instance.

Enhanced Features

When you create or edit a drop-down list, you can now sort the items in ascending or descending order.

Compatibility Matrix

SUGAR BUILDING BLOCKS	SUPPORTED VERSIONS	COMMENTS
PLATFORMS		Sugar runs on any OS that runs PHP
• Linux	Red Hat 4.x, 5.x (Advanced Server, Enterprise Server) Oracle Enterprise Linux 5.1 CentOS 4.x, 5.x	
• Windows	XP, 2003, Vista	
• Mac	OS X	
PHP		
PHP (MYSQL, SQL Server)	5.1.0 - 5.1.2, 5.1.4, 5.1.6, 5.2.0-5.2.6	
DATABASES		
• MYSQL	4.1.2x, 5.0x	
• MS SQL Server	2005	
WEB SERVERS		
• Apache	1.3x, 2.0x, 2.2x	Supports any version that runs PHP
• IIS	5.1, 6.0, 7.0	Supports any version that runs PHP
SUGAR PLUG-INS		
• Sugar Plug-In for Microsoft Outlook	Outlook 2003, 2007	
• Sugar Plug-In for Thunderbird	Thunderbird 1.5, 2.0	
• Sugar Plug-in for Microsoft Word	Word 2003, 2007, XP	
• Sugar Plug-in for Microsoft Excel 5.1	Excel 2007	
• Client (Browser)	Firefox 2.0 and 3.0 IE 6.0 and 7.0 Safari 3.0	
MULTIMEDIA		
• Adobe Flash	7 and above	
Recommended Stacks		
Linux Stack		
• PHP version	5.2.6	
• Apache	2.0.59, 2.2.3	
• RedHat Enterprise	Workstation 4	
Preferred Databases		
MySQL	5.0.41	
SQL Server	2005	
Windows Stack		
• Windows	2003	
• PHP version	5.2.6	

• IIS	6.0	
Preferred Databases		
MySQL	5.0.41	
SQL Server	2005	

Notes:

1. Strict mode is supported for MYSQL.
2. The PHP setting, `MBstring.func_overload=7` is supported.

Known Issues

Bug 26820

After upgrading to Sugar 5.2, the “Task ID” and “Duration” fields no longer display in the Project Task Detail View.

Known Limitations

- In the Module Loader, when you install a custom module that you exported as well as published, the “Uninstall” and “Disable” buttons do not display in the published module after the exported module is installed.
Therefore, it is recommended that developers publish modules on a different Sugar instance instead of the development instance.
- Some entry points were changed in Sugar 5.1. Hence, a custom file created in 5.0, unless you manually updated it with the new entry point in 5.1, may fail in 5.2 with the error message “Not a valid entry point”.

For example, if you have customized vCard, navigate to `custom\modules\
<module name>\metadata\detailviewdefs.php` and replace `<name="vcard" action="vCard.php">`

with the following:

```
<name="vcard" action="index.php">
<input type="hidden" name="entryPoint" value="vCard">
```
